

Underwater floodlights

PAR 56

PAR 56 (300 W). Low-cost entry model. Proven technology. Long service life. High quality materials.

BEHNCKE's underwater floodlight PAR 56 (300 W) is a low-cost but high-quality alternative for the entry-level segment.

The flush housing and the underwater floodlight insert, like its LED pendants, are also made of high-quality and resistant stainless steel (AISI 316), with an impressive finish. Mirror polished to a high gloss finish using a special process, even the faceplate leaves no aesthetic wishes unfulfilled.

Installation niche and connection box for the underwater floodlights PAR 56.

The underwater floodlight PAR 56 is equipped with an additional cooling slot in order to achieve a better circulation in the lamp housing. This ensures an optimized cooling.

Complete equipment and rational accessories from BEHNCKE. In addition, the area of application is universal.

The flush recess for the PAR 56 is equipped with lamps, cable conduit and cable with a length of 2.50 m. The stainless steel flush housing with sealing flange is universally usable for concrete, liner or prefabricated pools. Even a version with a sealing coat flange is optionally available.

Complete installation niche for prefabricated pools including stud bolt flange screws and gaskets, as well as an installation niche with circular flange.

All this underlines BEHNCKE's commitment to quality, especially in the entry-level segment.
